

GO-LIVE NOTE: NORTHSTAR SUPPORT CHATBOT

| Version: 1.0.0 (Release Candidate) | Author: Member 5 (QA & Release Lead) | Status: APPROVED FOR GO-LIVE

1. System Overview & Architecture

The **Northstar Support Chatbot** has successfully completed end-to-end (E2E) testing, edge-case validation, and Supabase database integration. The system is fully operational, secure against API key leakage, and approved for production deployment.

- **Tech Stack:** React + Vite + TypeScript (Frontend) | Supabase Cloud PostgreSQL (Backend) | Python Policy Engine (return_policy.py)

2. Edge-Case Test Matrix Results

Test ID	Scenario	Test Input	Expected Behavior	Status
TC-01	Valid Order Lookup	ORD1001	Fetches order details & eligible return options	PASS
TC-02	Expired Return Window	ORD1002	Denies auto-return (> 30-day policy window)	PASS
TC-03	Final Sale Item	ORD1003	Rejects return based on non-returnable policy	PASS
TC-04	Damaged Goods Fast-Track	ORD1004	Escalates directly to human support agent	PASS
TC-05	Missing ID Prefix	1001	Prompts user for proper format (ORDXXXX)	PASS
TC-06	Unknown Order ID	ORD9999	Returns 'Order not found' error message	PASS
TC-07	Missing .env Credentials	Unset .env	Displays database connection error	PASS

3. Security & Database Hand-Off

- **Database Deployment:** Supabase Cloud PostgreSQL instance deployed and initialized with complete SQL schema and test seed records (ORD1001–ORD1004).
- **Environment Secrets:** .env file untracked from Git history and enforced via .gitignore to prevent public credential exposure.
- **Access Control:** Public access protected via Supabase Row-Level Security (RLS) policies and properly scoped ANON_KEY permissions.

4. Release Checklist & Sign-Off

- ✓ All functional code merged cleanly into main branch with zero Git conflicts.
- ✓ Schema and order seed data verified active on Supabase Cloud.
- ✓ Production build (npm run build) completed with zero TypeScript compile errors.
